Warranty Policy

No -Fault Warranty

Motors with frame sizes 215T and smaller are covered under a "No-Fault" warranty. This warranty claim is offered one time, per end-user, per application. If there is more than one failure, please contact the Service Department for review. The following must be sent to the WEG Service Department to process a "No-Fault" warranty claim.

- Original nameplate from the failed motor (or, for a Shark-line motor, its terminal box cover)
- Copy of the original WEG invoice or invoice # for the failed motor
- Brief description of the failure for quality control purposes
- Please send request no later than 30 days after failure.

Warranty on Larger Motors

WEG Electric requires that motors larger than 215T frame be inspected by a WEG Authorized Service Center, or if none is available, an EASA-affiliated service shop. Depending on the inspection results, WEG will decide whether to cover the motor under warranty. Prior to a decision being made on a claim for warranty, the following are required from the service shop and customer.

- Completed EASA inspection report
- Repair Quote
- Copy of the original WEG Invoice or WEG Invoice Number
- For Frame 215T and above, photos of the failure in JPEG format suitable for e-mailing

The inclusion of photos allows WEG to properly evaluate the details of your claim, as well as to ensure that any data sent to our factory Quality Control engineers are fully understood. The warranty claim will be evaluated after receipt of the above items. Upon review of the claim, the WEG Service Department will make contact and advise how to proceed. The service shop should not remove the nameplate nor make repairs without being requested to do so by a WEG Service Department representative.

NOTE: For all Ingersoll-Rand motors, please contact the WEG Service Department prior to any inspection.

Communication

Correspondence with the WEG Service Department may be via e-mail, fax or regular mail. Please keep a photocopy of all nameplates for your records.

Limited Warranty:

WEG Electric Corp. is proud of all of our product lines. WEG and its employees are committed to our customers and users to provide the best designed and manufactured motors, drives and controls. WEG provides a limited warranty on our products against defects in materials and workmanship for a specific period from the date of purchase. If a motor's date code is within its stated warranty period (18 month, 36 month, etc.), no proof of purchase is required. Otherwise, a copy of the invoice is necessary to show the date of purchase.

Warranty Period:

- The standard warranty for WEG products is 18 months from the invoice date.
- For General Purpose TEFC and ODP Premium Efficiency motors the warranty is 36 months from the invoice date.
- For IEEE 841 motors, the warranty is 60 months from the invoice date.

Authorized Service Centers:

WEG has service centers around the world to meet the needs of our customers. Information regarding the nearest service center can be found on our web site at **www.weg.net/us** or by calling **1-800-ASK-4WEG** (1-800-275-4934). Any warranty repair by a service shop must be pre-approved by WEG.

Warranty Service:

If a WEG product requires warranty service due to defective materials or workmanship, WEG will, at its option, either repair or replace the defective product. By "replace", WEG means the original purchaser's account will be credited for the cost on the WEG invoice (less freight). If warranty is granted, and replacement is specified, the motor's nameplate must be sent to the Service Dept. Warranty is applied to products that have been, at all times, properly maintained and operated or used under normal operating conditions for which the product was designed. WEG is not responsible for any expenses incurred in installation, removal from service, transportation (freight) or consequential expenses.

Limitation of Warranty:

THE FOREGOING WARRANTIES ARE EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES OF QUALITY AND PERFORMANCE, WRITTEN, ORAL OR IMPLIED, AND ALL OTHER WARRANTIES INCLUDING ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR ARISING FROM COURSE OF DEALING OR USAGE OF TRADE ARE HEREBY DISCLAIMED BY WEG. THE FOREGOING OBLIGATION TO REPAIR OR REPLACE WEG PRODUCTS OR PARTS SHALL BE THE SOLE AND EXCLUSIVE REMEDY OF THE PURCHASER, ITS CUSTOMERS, OR USERS OF THE PRODUCTS OR PARTS.

Proper Storage of Motors:

When motors are not immediately installed, they should be stored in their normal upright position in a dry even temperature location, free of dust, gases and corrosive atmosphere. Inactive motors tend to expel grease from between the bearing surfaces, thereby removing the protective film that impedes metal-to-metal contact. At least once per month shafts should be rotated in accordance with WEG's installation and maintenance manual. Motors stored for a period exceeding one year should have the bearings re-lubricated in accordance with the WEG motor installation and maintenance manual.

RETURN POLICY

WEG products that are purchased from our stocking warehouses must be returned within 90 days, freight to be paid by customer. Returned products must be unused, and in undamaged original packaging.
If products are ordered incorrectly by the customer and need to be returned to stock, then a 20% re-stocking charge will be applied. If an order of equal or greater amount is placed at the time of the return, then the fee will be reduced to 10%. If the returned products are deemed not to be in unused, undamaged condition, or in original packaging, then additional fees will be applied (up to and including full price of item). Returns on any modified products will not be allowed. Any products that are ordered as specials (with features that would not allow them to be stocked items) cannot be returned.

Three-Phase General Purpose Motors

BRAKE MOTORS – Three-Phase

TEFC - High Efficiency

WEG brake motors consist of an induction motor coupled to a disc brake. Brake is of sturdy construction with few moving parts which guarantees long durability and minimum maintenance.

Standard Features:

- Class F insulation (Impregnation Resin and Magnet Wire are class H)
- F1 Mounted
- Stainless Steel Nameplate - Laser etched with high contrast background
- Regreasable ball bearings (Frames 254T and up)

Features that make a difference:

- 1.25 service factor
- NPT Threaded terminal box
- Armature type brake
- Manual Release

Inverter Rated:
1000:1 for variable torque
12:1 for constant torque

If separate power supply to the Brake is required, (Such as on Motors operating from Variable frequency Controller); 230V to the Brake module is mandatory, unless motor model contains “Q” (ex. 00118EP3EBMQ143T). For “Q” models, the input voltage to the Brake module is 460V AC.

Severe Duty Three-Phase Motors

IEEE 841 - THREE PHASE

TEFC - NEMA Premium

WEG's IEEE 841 motors are specially suited for Pulp & Paper mills, Steel mills, Petrochemical Plants and diverse demanding applications requiring severe duty long life motors.

WEG's W22 cast iron platform has an improved cooling system and solid feet for cooler operation and reduced vibration and noise extending the life of the motor.

Standard Features:

- Class F insulation (Impregnation Resin and magnet wire are class H)
- F1 Mounted (F2 convertible). Frames 447T and up can easily be F2 converted by simply rotating the terminal box adapter
- Stainless Steel Nameplate - Laser etched with high contrast background
- All frames with regreasable ball bearings
- Class I, Div. 2, Groups A, B, C & D – T3, Class II, Div 2, Groups F & G – T3C

Inverter Rated:
1000:1 for variable torque
20:1 for constant torque

** Frame 586/7 250HP and up 6:1 CT and 1000:1 VT*

Features that make a difference:

- 1.25 service factor up to 100 HP
- InproSeal Bearing Isolators both ends
- Bearing protection meets IP56
- Rubber lead separator between terminal box and frame
- Vibration: 0.04 inches per second or less
- Guaranteed foot flatness to within 0.005"
- Bearing life 50,000 hours (L-10)
- Epoxy Paint system exceeds 250hrs Salt Fog test
- Interior surfaces are epoxy coated
- Non-sparking fan
- NPT Threaded terminal box
- Seamless copper lead lugs
- Seamless Stainless Steel grease extension tubes
- Automatic grease relief fittings
- IEEE 841 Test Report in conduit box
- Suitable for IEEE45 USCG 259 – Marine Duty

Air Handling Motors

COOLING TOWER MOTORS

Three-Phase TEFC & TEAO

WEG's cooling tower motors are designed for operation in 100% humidity and the most corrosive environments. They designed to operate in either horizontal or vertical mounting.

WEG's W22 cast iron platform has an improved cooling system and solid feet for cooler operation and reduced vibration and noise extending the life of the motor.

Standard Features:

- 50/60 Hz rated (380V on Nameplate - 400/415 Available - Same Horse Power at 50 Hz with a 1.0 service factor)
- Class F insulation (Impregnation Resin and magnet Wire are class H)
- Standard mounting is F2. F1 mounted motors are identified in the part number. (Both configurations are convertible). Frames 447T and up can easily be converted by simply rotating the terminal box adapter
- Stainless Steel Nameplate - Laser etched with high contrast background
- Double Sealed bearings

Features that make a difference:

- 1.25 service factor
- Multiple endbell drain plugs for shaft up, down or horizontal mounting
- Drain plugs in terminal box
- Rubber lead separator between terminal box and frame
- Internally and externally epoxy painted
- Double sealed bearings
- Double impregnation and bake

Inverter Rated:
1000:1 for variable torque

Pump Genius Enabled CFW11

Pump Genius process control software is designed to reduce system operation and maintenance costs while increasing process accuracy and protection. The software provides multiple pump control and protection, as well as system monitoring and protection. Pump Genius can be applied to any system that requires constant flow or pressure.

Benefits

- Reduced System Component Cost
- Improved System Reliability
- Reduce Maintenance Costs
- Eliminate Costly Control Panels
- Reduce System Energy Requirements
- Reduce Overall Installation Costs

System Operation

- Pump Genius software monitors system pressure or flow and references low / high set point and run time requirements.
- The lead and lag pumps are cycled on and off based on motor run times.
  - Starting motors are selected based on run time - motor with least amount of run time
  - Stopping motors are selected based on run time - motor with highest amount of run time
  - All pumps are dynamically alternated based on run times and system set point requirements
- System faults are monitored and alarmed
- Motor faults are monitored and alarmed
- Drive faults are monitored and alarmed
- Up to 6 pumps dynamically alternated and controlled

Pump Motors

CLOSE-COUPLED PUMP MOTORS

ODP - Three Phase

WEG Open Drip Proof motors are designed to meet demanding applications in environments where dirt and humidity are minimal. These motors are specifically designed to provide maximum ventilation and heat dissipation.

Inverter Rated: 1000 : 1 for variable torque

Features that make a difference:

- 50/60 Hz rated (380V on Nameplate - 400/415 Available - Same Horse Power at 50 Hz with a 1.0 service factor)
- Class F insulation (Impregnation Resin and Magnet wire are class H)
- F1 Mounted (Cast Iron Frame motors are F2 convertible)
- Stainless Steel Nameplate - Laser etched with high contrast background (Cast Iron Frame only)
- Regreasable ball bearings (Frames 254JM/JP and up)
- Aegis Ring™ inside. See page 229

TEFC - Three Phase

High performance with maximum energy efficiency, this is the meaning of the new WEG electric motor. High efficiency and Low cost of Ownership throughout the entire motor lifetime have been the basis for the W22 development. A design created to anticipate concepts on performance and energy savings.

WEG's W22 cast iron platform has an improved cooling system and solid feet for cooler operation and reduced vibration and noise extending the life of the motor.

Inverter Rated: 1000 : 1 for variable torque

System Drive VFD AC Motors

1HP – 1500HP TEFC

The WEG Systems Drive VFD AC motor raises the bar for customers who demand the best. Benefits such as very high overload and expanded speed range capabilities increase the value of the product for many variable speed applications.

The designs are based on the W22 and H-Line Severe Duty motor platforms for outstanding reliability.

What makes this a Systems Drive Motor

- Constant torque capability to zero speed in standard NEMA frame size TEFC motor
- High torque designs for wide constant HP capability
- High short term overload capacities can exceed 200%
- 3 NC thermostats on winding
- Drive end shaft grounding available (standard 447T and larger)
- Insulated opposite drive end bearings available (standard 447T and larger)
- Very low noise
- Class I and Class II Division 2 up to 20:1CT to 449T frame (certification on larger ratings upon request)
- VFD rated insulation system exceeds requirements of NEMA MG1 Part 31 standard
- Custom designs for non-standard base speeds/frequencies (i.e. 600RPM base speed with 6-pole design) to replace many DC motor applications without gearing change

Features:

- 1000:1 Constant Torque
- Powerful
- Reliable
- Flexible

What makes this a WEG Motor

- Rugged FC200 high strength cast iron construction
- Paint system exceeds 200 hour salt spray test per ASTM B117
- PPLS – Positive Pressure Lubrication System
- All Silicon C4 coated lamination steel for reliability and repairability* – withstands burnout temperatures of 500C(935F) without loss of insulating properties. This allows the motor to be rewound back to the original efficiency
- Class F insulation system with mostly Class H components for long life
- Stainless steel nameplate

Three-Phase Brake Motors

TEFC - High Efficiency

WEG brake motors consist of an induction motor coupled to a disc brake. Brake is of sturdy construction with few moving parts which guarantees long durability and minimum maintenance.

Standard Features:

- Class F insulation (Impregnation Resin and Magnet wire are class H)
- F1 Mounted
- Stainless Steel Nameplate - Laser etched with high contrast background
- Regreasable ball bearings (Frames 254T and up)

Features that make a difference:

- 1.25 service factor
- NPT Threaded terminal box
- Armature type brake
- Manual Release

Inverter Rated:
1000:1 for variable torque
12:1 for constant torque

If separate power supply to the Brake is required, (Such as on Motors operating from Variable frequency Controller); 230V to the Brake module is mandatory, unless motor model contains "Q" (ex. 00118EP3EBMQ143T). For "Q" models, the input voltage to the Brake module is 460V AC.

Test Description:

Routine Test

– Winding resistance check (at cold)
– Locked Rotor test (torque, current and absorbed power)
– No-load test (current and absorbed power)
– Hi-pot
– Insulation resistance
– Accessories check for continuity (if applicable)

Type Test

– Winding resistance check (at cold)
– Locked Rotor test (torque, current and absorbed power)
– Load test, including temperature rise with constant output power at full load)
– Breakdown Torque test
– No-load test (current and absorbed power)
– Vibration test on motors 364/5T and above
– Hi-pot
– Insulation resistance
– Accessories check for continuity (if applicable)

Vibration Test

– Vibration measure on as many as 6 points, depending on the mechanical envelope of the motor allowing access to all the reading points
– Test performed with half key on the shaft
– Performed with motor on an elastic mounting base (rigid base when requested)

Noise Test

– Performed at no load on an acoustic chamber
– Measurements at 1m (~ 3.3ft) distance from the motor
– Readings:
  • Total sound pressure level of the motor at 4 points, in dB(A)
  • Bearings sound pressure level in dB(A)
  • Frequency spectrum of the global noise for the point with most intense reading, at 50% and 100% of rated voltage
  • Frequency spectrum of the bearings noise for the for the point with the most intense global reading, at 50% and 100% of rated voltage
